

18 A ball falls towards the ground from point X. Point X is 2.4 m above the ground.

The ball rebounds from the ground and rises to point Y. Point Y is 1.8 m above the ground.

A single value of the change in height Δh is used to calculate the change in gravitational potential energy of the ball from X to Y.

What is the magnitude of Δh ?

A 0.6 m

B 1.8 m

C 2.4 m

D 4.2 m
