

- 19** An object travels between two points. The change in gravitational potential energy ΔE_p of the object is given by

$$\Delta E_p = mg\Delta h$$

where m is the mass of the object, Δh is its change in height and g is the acceleration of free fall.

What is a necessary condition in order for the above equation to be valid?

- A** The object must have a constant acceleration of 9.81 m s^{-2} .
- B** The object must be travelling in a uniform gravitational field.
- C** The object must be travelling only in a vertical direction.
- D** The resultant force on the object must be equal to its weight.
