9(a)	flux density $\times$ area	**M1**
	where flux is normal to area	**A1**
	or	
	flux density $\times$ area $\times$ sin θ	**(M1)**
	where θ is angle between flux direction and (plane of) area	**(A1)**
9(b)(i)	(alternating) current creates changing (magnetic) flux	**B1**
	core links (magnetic) flux with secondary coil	**B1**
	changing flux (in secondary) causes induced e.m.f.	**B1**
9(b)(ii)	rate of change of flux is not constant	**B1**
	(induced) e.m.f. is proportional to rate of change of flux	**B1**
9(c)	reduces induced currents in core	**B1**
	hence reduces energy losses (in core)	**B1**
