9(a)	(particle is) stationary/not moving	**B1**
	(particle is) moving parallel to the (magnetic) field	**B1**
9(b)	magnetic field around each coil is circular **or** each coil is normal to magnetic field due to adjacent coils	**B1**
	current in coil interacts with (magnetic) field to exert force (on coil)	**B1**
	force is normal to both coil and magnetic field **or** force parallel to axis (of coil)	**B1**
	forces between coils are attractive so spring contracts	**B1**
9(c)	(oscillating) coils cut magnetic flux **or** as separation of coils changes, magnetic flux changes	**B1**
	cutting flux causes induced e.m.f. in coils	**B1**
	<u>changing</u> (induced) e.m.f. causes changing current (in coil)	**B1**
