

- 5 (a) State Kirchhoff's first law.

..... [2]

- (b) The circuit shown in Fig. 5.1 contains a battery of electromotive force (e.m.f.)  $E$  and negligible internal resistance connected to four resistors  $R_1$ ,  $R_2$ ,  $R_3$  and  $R_4$ , each of resistance  $R$ .

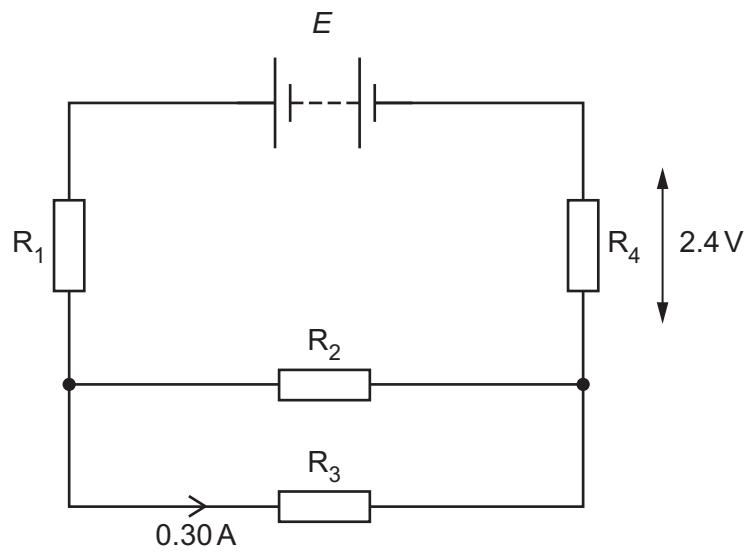

Fig. 5.1

The current in  $R_3$  is  $0.30\text{ A}$  and the potential difference (p.d.) across  $R_4$  is  $2.4\text{ V}$ .

- (i) Show that  $R$  is equal to  $4.0\Omega$ .

..... [2]

- (ii) Determine the e.m.f.  $E$  of the battery.

$$E = \dots \text{ V} \quad [2]$$

- (c) The battery in (b) is replaced with another battery of the same e.m.f.  $E$  but with an internal resistance that is not negligible.

State and explain the change, if any, in the total power produced by the battery.

.....  
.....  
..... [2]

- (d) The resistors in the circuit of Fig. 5.1 are made from nichrome wire of uniform radius  $240\text{ }\mu\text{m}$ . The length of this wire needed to make each resistor is  $0.67\text{ m}$ .

Calculate the resistivity of nichrome.

$$\text{resistivity} = \dots \Omega\text{ m} [3]$$
