

- 1 A steel ball is placed on the inside surface of a hollow circular cone. The ball moves in a horizontal circle at constant speed, as shown in Fig. 1.1.

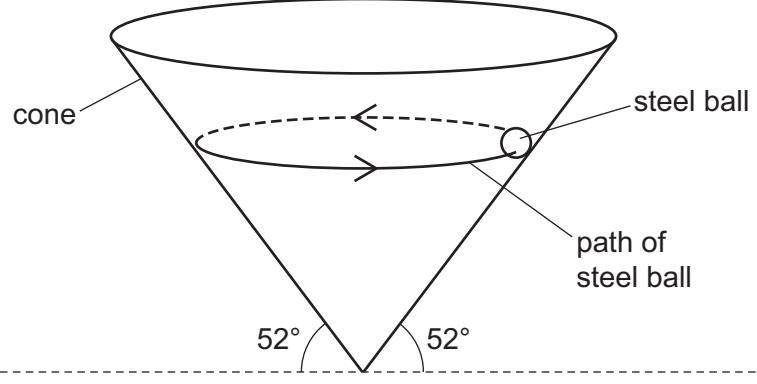

Fig. 1.1

The angle of the side of the cone to the horizontal is 52° . There is no friction between the ball and the cone.

- (a) Fig. 1.2 shows a cross-section through the cone and the steel ball.

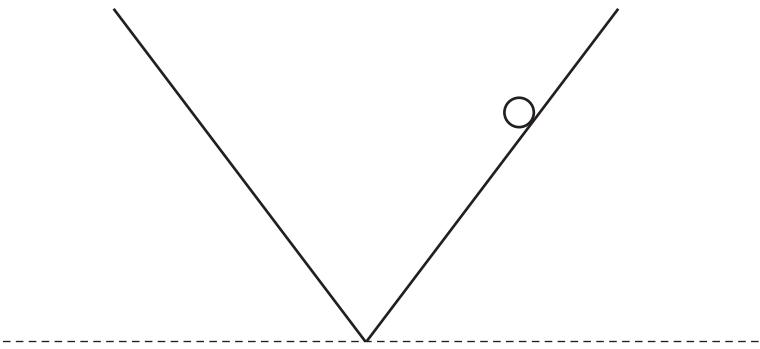

Fig. 1.2

On Fig. 1.2, draw labelled arrows to show the **two** forces acting on the ball. [1]

- (b) Describe how the forces acting on the ball cause its acceleration to be centripetal.

- (c) The ball moves in a circle of radius 0.15 m.

Show that the speed of the ball is 1.4 ms^{-1} .

[3]

- (d) Calculate the angular speed ω of the ball.

$$\omega = \dots \text{ rad s}^{-1} \quad [2]$$

- (e) The speed of the ball is increased.

Explain why the radius of the circular path of the ball increases.
