

26 Two polarising filters are placed next to each other so that their planes are parallel.

The first polarising filter has its transmission axis at an angle of 50° to the vertical.

The second polarising filter has its transmission axis at an angle of 20° to the vertical. The angle between the transmission axes of the two polarising filters is 30° .

A beam of vertically polarised light of intensity 8.0 W m^{-2} is incident normally on the first polarising filter.

What is the intensity of the light that is transmitted from the second polarising filter?

A zero

B 2.5 W m^{-2}

C 2.9 W m^{-2}

D 6.0 W m^{-2}

27 A solution contains

starch solution, iodine solution, potassium bromate, PbI_2 , $\text{Na}_2\text{S}_2\text{O}_3$
