

- 5 A cuboidal block floats in a liquid with its base horizontal, as shown in Fig. 5.1.

Fig. 5.1

The base of the block is at a depth  $h$  below the surface of the liquid.

The block is displaced downwards by a small distance and then released so that it oscillates.

Fig. 5.2 shows the variation with  $h$  of the acceleration  $a$  of the block.

Fig. 5.2

Fig. 5.3 shows the variation with  $h$  of the kinetic energy  $E_K$  of the block.

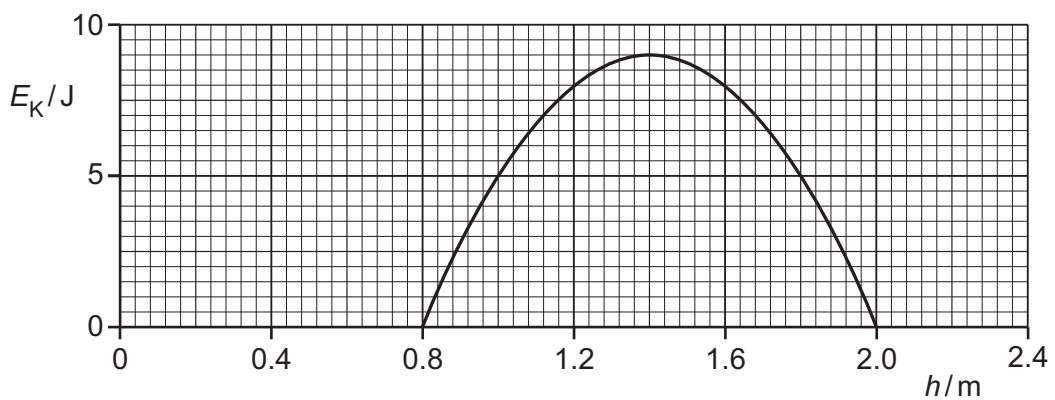

Fig. 5.3

- (a) (i) Determine the amplitude of the oscillations.

amplitude = ..... m [1]

- (ii) State what the line in Fig. 5.2 shows about the nature of the oscillations.

..... [1]

- (b) State **three** other quantitative conclusions that can be drawn from Fig. 5.2 and Fig. 5.3 about the block and its oscillations. Use the space for any working.
