

- 1 The orbit of the Earth, mass  $6.0 \times 10^{24}$  kg, may be assumed to be a circle of radius  $1.5 \times 10^{11}$  m with the Sun at its centre, as illustrated in Fig. 1.1.

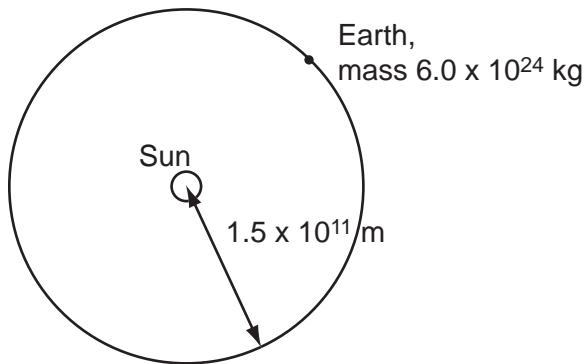

Fig. 1.1

The time taken for one orbit is  $3.2 \times 10^7$  s.

(a) Calculate

(i) the magnitude of the angular velocity of the Earth about the Sun,

$$\text{angular velocity} = \dots \text{rad s}^{-1} \quad [2]$$

(ii) the magnitude of the centripetal force acting on the Earth.

$$\text{force} = \dots \text{N} \quad [2]$$

- (b) (i) State the origin of the centripetal force calculated in (a)(ii).

.....  
..... [1]

- (ii) Determine the mass of the Sun.

mass = ..... kg [3]
