

8(a)	a region where a magnet / magnetic material / moving charge / current carrying conductor experiences a force	B1
8(b)	$B = F / Il$ e.g. $= 9 \times 10^{-3} / (5.0 \times 0.045)$	C1
	= 0.040 T	A1
8(c)(i)	force is (always) perpendicular to the velocity / direction of motion	B1
	magnetic force provides the centripetal force or force perpendicular to motion causes circular motion	B1
	magnitude of force (due to the magnetic field) is constant or no work done by force or the force does not change the speed	B1
8(c)(ii)	Applying the list rule, any 2 from: accelerating p.d. radius of path / radius of semicircle magnetic flux density	B2
