

10(a)	(induced) electromotive force is proportional to rate	M1
	of change of (magnetic) flux (linkage)	A1
10(b)(i)	to change magnitude of potential difference	B1
10(b)(ii)	magnitude of e.m.f. varies as rate of change of flux changes	B1
	direction of e.m.f. changes when direction of change of flux reverses/when flux changes from increasing to decreasing	B1
	flux is continuously increasing and decreasing, so polarity of e.m.f. is continuously switching	B1
10(b)(iii)	to reduce energy/power losses or to reduce eddy currents	B1
