

2(a)	constant gradient	B1
2(b)	(displacement until 0.20 s =) $\frac{1}{2} \times 1.96 \times 0.20$ (= 0.196 m) or (displacement after 0.20 s =) $\frac{1}{2} \times 6.86 \times 0.70$ (= 2.401 m)	C1
	height = 2.401 – 0.196	C1
	= 2.2 m	A1
	<i>(alternative methods are possible using equations of uniformly accelerated motion)</i>	
2(c)	$(\Delta)E = mg(\Delta)h$ or $W(\Delta)h$	C1
	$(\Delta)E = 0.86 \times 2.2$ = 1.9 J	A1
2(d)	curved line from the origin	M1
	gradient of curved line decreases and is zero at $t = 0.20$ s only	A1
2(e)	acceleration (of free fall) is unchanged/is not dependent on mass <u>and</u> (so) no effect	B1
