

5(a)(i)	unmodulated (radio) waves would interfere with each other or not modulating would require aerials too long (to be practical)	B1
5(a)(ii)	advantage: • can transmit higher frequencies • higher quality <u>reproduction</u> • less prone to interference • same frequency can be used in different areas (any one point)	B1
	disadvantage: • takes up greater bandwidth • shorter range of transmission • requires a greater number of transmitting aerials (any one point)	B1
5(b)	AM amplitude: min. 8 mV and max. 12 mV	B1
	AM frequency: min. 100 kHz and max. 100 kHz	B1
	FM amplitude: min. 10 mV and max. 10 mV	B1
	FM frequency: min. 90 kHz and max. 110 kHz	B1
5(c)	8.4 kHz	A1
