

2	(a) SI units for T : s, R : m and M : kg (or seen clearly in formula)	C1	
	$K = T^2 M / R^3$ units: $\text{s}^2 \text{ kg m}^{-3}$ (allow $\text{s}^2 \text{ kg} / \text{m}^3$ or $\frac{\text{s}^2 \text{ kg}}{\text{m}^3}$)	A1	[2]
	(b) % uncertainty in K : 1% (for T) + 3% (for R) + 2% (for M) OR = 6%	C1	
	$K = [(86400)^2 \times 6 \times 10^{24}] / (4.23 \times 10^7)^3 = 5.918 \times 10^{11}$	C1	
	6% of $K = 0.355 \times 10^{11}$	C1	
	$K = (5.9 \pm 0.4) \times 10^{11}$ (SI units) correct power of ten required for both [incorrect % value then max. 1]	A1	[4]
