

- | | | | |
|---|--|----|-----|
| 7 | coil in series with meter (<i>do not allow inclusion of a cell</i>) | B1 | |
| | push <u>known</u> pole into coil | B1 | |
| | observe current <u>direction</u> (<i>not reading</i>) | B1 | |
| | (induced) field / field from coil repels magnet | B1 | |
| | <i>either</i> states rule to determine direction of magnetic field in coil | | |
| | <i>or</i> reversing magnet direction gives opposite deflection on meter | B1 | |
| | direction of induced current such as to oppose the change producing it | B1 | [6] |
