

9(a)	(magnetic) flux density $\times$ area $\times$ number of turns	M1
	area is perpendicular to (magnetic) field	A1
9(b)	use of $t = 1.2$ s	C1
	$\varepsilon = \frac{\Delta BAN}{\Delta t}$ $= \frac{0.250 \times \pi \times 0.030^2 \times 540}{1.2}$	C1
	= 0.32V	A1
9(c)(i)	light damping	B1

Question	Answer	Marks
9(c)(ii)	sheet cuts (magnetic) flux and causes induced emf	B1
	(induced) emf causes (eddy) currents (in sheet)	B1
	either currents (in sheet) cause resistive force or currents (in sheet) dissipate energy	B1
	smaller currents in Y or larger currents in X, so dashed line is X	B1
