

|          |                                                      |           |
|----------|------------------------------------------------------|-----------|
|          |                                                      |           |
| 1(a)     | density and temperature indicated as scalars         | <b>B1</b> |
|          | acceleration and momentum indicated as vectors       | <b>B1</b> |
| 1(b)(i)  | decelerates<br><b>or</b><br>speed/velocity decreases | <b>B1</b> |
| 1(b)(ii) | speed = $(\Delta)d / (\Delta)t$ <b>or</b> gradient   | <b>C1</b> |
|          | = e.g. $(0.56 - 0.20) / 1.5$                         | <b>A1</b> |
|          | = $0.24 \text{ ms}^{-1}$                             |           |
| 1(c)     | displacement is zero (so) average velocity is zero   | <b>B1</b> |
