

11	(a)	(i)	amplitude of the carrier wave varies (in synchrony) with the displacement of the information signal	M1 A1	[2]
		(ii)	e.g. more than one radio station can operate in same region/less interference enables shorter aerial increased range/less power required/less attenuation less distortion <i>(any two sensible answers, 1 each)</i>	B2	[2]
	(b)	(i)	frequency = 909 kHz wavelength = $(3.0 \times 10^8) / (909 \times 10^3)$ = 330 m	C1 A1	[2]
		(ii)	bandwidth = 18 kHz	A1	[1]
		(iii)	frequency = 9000 Hz	A1	[1]
