

2(a)(i)	0 K	B1
2(a)(ii)	(measurement) depends on properties of the liquid	B1
2(b)(i)	- resistivity varies with temperature - variation with temperature is linear - unique value of resistivity for each (different value of) temperature <i>Any two points, 1 mark each</i>	B2
2(b)(ii)	thermometer has high heat capacity/specific heat capacity or energy transfer needed for thermometer to reach correct temperature or thermometer takes time to reach the correct temperature	B1
2(b)(iii)	thermocouple	B1
2(c)	(variation is) inverse or (variation is) non-linear	B1
