

5(a)	force per unit charge	B1
	force on positive charge	B1
5(b)(i)	four straight vertical parallel lines, approximately evenly spaced	B1
	arrows downwards	B1
5(b)(ii)	$E = V / d$	C1
	$E = 430 / 0.067$ $= 6.4 \times 10^3 \text{ N C}^{-1}$	A1
5(b)(iii)	smooth curve within plates and straight lines outside plates	B1
	direction of deflection shown as upwards	B1
5(c)(i)	into the page	B1
5(c)(ii)	forces are in opposite directions	B1
	(undeviated) when (magnitudes of) forces are equal	B1
5(c)(iii)	$Eq = Bqv$	C1
	$B = E / v = (6.4 \times 10^3) / (2.6 \times 10^7)$ $= 2.5 \times 10^{-4} \text{ T}$	A1
