

(if explains in terms of air resistance, allow first mark only)

4 (a) wavelength = 1.50 m **B1 [1]**

(b) $v = f \lambda$ **C1**

speed = 540 m s⁻¹ **A1 [2]**

(c) (progressive) wave reflected at the (fixed) ends **B1**

wave is formed by superposition of (two travelling) waves **B1**

this quantity is the speed of the travelling wave **B1 [3]**

5 (a) (i) E/λ **B1**
