

10 (a)	iron rod changes flux (density)/field	B1	
	change of <u>flux in coil Q</u> causes induced e.m.f.	B1	[2]
(b)	constant reading (either polarity) from time zero to near t_1	B1	
	spike in one direction near t_1 clearly showing a larger voltage	M1	
	of opposite polarity	A1	
	zero reading from near t_1 to t_2	B1	[4]
