

1	(a)	charge is quantised/enabled electron charge to be measured	B1	[1]
	(b)	<u>all</u> are (approximately) $n \times (1.6 \times 10^{-19} \text{ C})$	M1	
		so $e = 1.6 \times 10^{-19} \text{ C}$ (allow 2 sig. fig. only)	A1	[2]
		<i>summing charges and dividing ten, without explanation scores 1/2</i>		
		Total		[3]
2	(a)	<u>mean</u> (value of the) <u>square</u>	M1	
		<i>of the squared (positions) of the electrons (or particles) in the</i>	A1	[2]
