

5(a)(i)	the dippers are connected to the same vibrator/motor	B1
5(a)(ii)	(the overlapping waves have) similar/same amplitude	B1
5(b)	any means of 'freezing' the pattern e.g. use a stroboscope/strobe	B1
5(c)	$vT = \lambda$ or $v = f\lambda$ and $f = 1 / T$	C1
	$T = 0.060 / 0.40$ $= 0.15 \text{ s}$	A1
5(d)(i)	path difference = 3.0 cm	A1
5(d)(ii)	phase difference = 180°	A1
5(e)	line drawn joining points where only maxima are observed (i.e. through points where wavefronts intersect) of length at least 4 cm	B1
