

Question	Answer	Marks
5(a)(i)	(coherence means) constant phase difference (between waves)	B1
5(a)(ii)	(interference is) the sum/addition/combination of the displacements of overlapping/meeting waves	B1
5(b)(i)	$n\lambda = d \sin \theta$	C1
	$\lambda = \sin 51^\circ / (2 \times 6.7 \times 10^5)$ $= 5.8 \times 10^{-7} \text{ m}$	A1
5(b)(ii)	smaller angle (corresponding to second order maxima and so) shorter distance (between second order maxima spots)	B1
