

Question	Answer	Marks
8	strong (uniform) magnetic field	B1
	* <u>nuclei</u> precess/rotate about field (direction)	
	radio frequency pulse/RF pulse (applied)	B1
	* RF or pulse is at Larmor frequency / frequency of precession	
	causes resonance / excitation (of nuclei)/nuclei to absorb energy	B1
	on relaxation/de-excitation, nuclei emit RF/pulse	B1
	* (emitted) RF/pulse detected and processed	
	non-uniform field (superposed on uniform field)	B1
	allows positions of (resonating) <u>nuclei</u> to be determined	B1
	* allows for position of detection to be changed/different slices to be studied	
	<i>max. 2 of additional detail points marked *</i>	B2
