

8	strong <u>uniform</u> magnetic field	B1
	nuclei precess/rotate about field (direction)	(1)
	radio-frequency pulse (applied)	B1
	R.F. or pulse is at Larmor frequency/frequency of precession	(1)
	causes resonance/excitation (of nuclei)/nuclei absorb energy	B1
	on relaxation/de-excitation, nuclei emit r.f./pulse	B1
	(emitted) r.f./pulse detected and processed	(1)
	non-uniform magnetic field	B1
	allows position of nuclei to be located	B1
	allows for location of detection to be changed/different slices to be studied	(1)
	<i>any two of the points marked (1)</i>	B2 [8]
