

Question	Answer	Marks
2(a)	work done on / by system	B1
	thermal energy supplied to / removed from system	B1
2(b)(i)	no thermal energy transferred to / from system (due to lack of time)	B1
	work is done on the gas to compress it / to decrease its volume	B1
	internal energy increases so temperature increases	B1
2(b)(ii)	(during vaporisation) molecular separation increases	B1
	(heating causes) potential energy of molecules to increase	B1
	kinetic energy of molecules unchanged so temperature unchanged	B1
