

2	(a) no resultant force/sum of forces zero no resultant moment/torque/sum of moments/torques zero	B1 B1	[2]
	(b) (i) each force is represented by the side of a triangle/by an arrow in magnitude and direction arrows joined, head to tail (could be shown on a sketch diagram)	M1 A1 B1	[3]
	(ii) if the triangle is 'closed' (then the forces are in equilibrium)	B1	[1]
	(c) triangle drawn with correct shape (incorrect arrows loses this mark) $T_1 = 5.4 \pm 0.2 \text{ N}$ $T_2 = 4.0 \pm 0.2 \text{ N}$	B1 B1 B1	[3]
	(d) forces in strings would be horizontal (so) no vertical force to support the weight	B1 B1	[2]
3	(a) evidence of use of area below the line	B1
