

- | | | | |
|-------------------|--|----------|-----|
| 11 (a) (i) | switch
so that one aerial can be used for transmission and reception | M1
A1 | [2] |
| (ii) | tuning circuit
to select (one) carrier frequency (and reject others) | M1
A1 | [2] |
| (iii) | analogue-to-digital converter/ADC
converts microphone output to a digital signal | M1
A1 | [2] |
| (iv) | (a.f.) amplifier (<i>not r.f. amplifier</i>)
to increase (power of) signal to drive the loudspeaker | M1
A1 | [2] |
| (b) | e.g. short aerial so easy to handle
short range so less interference between base stations
larger waveband so more carrier frequencies
(<i>any two sensible suggestions, 1 each, max 2</i>) | B2 | [2] |
