

- | | | | | |
|---|-----|--|----|-----|
| 5 | (a) | supply connected correctly (to left & right) | B1 | |
| | | load connected correctly (to top & bottom) | B1 | [2] |
| | | | | |
| | (b) | e.g. power supplied on every half-cycle
greater <u>average/mean</u> power
<i>(any sensible suggestion, 1 mark)</i> | B1 | [1] |
| | | | | |
| | (c) | (i) reduction in the variation of the output voltage/current | B1 | [1] |
| | | (ii) larger capacitance produces more smoothing
<i>either</i> product RC larger
<i>or</i> for the same load | M1 | |
| | | | A1 | [2] |
| | | | | |
| 6 | (a) | unit of magnetic flux density | B1 | |
