

8(a)	$\lambda = \frac{h}{p}$ or $\lambda = \frac{h}{mv}$	M1
	where h is the Planck constant and p is the momentum (of particle) / mv is the momentum (of particle) / m is the mass (of particle) and v is the velocity (of particle)	A1
8(b)(i)	(electron) diffraction	B1
8(b)(ii)	moving electrons behave like waves	B1
8(b)(iii)	spacing between atoms $\approx$ wavelength of electron or diameter of atom $\approx$ wavelength of electron	B1
8(b)(iv)	Any one of: - wavelength has decreased - electron had greater momentum	M1
	so (accelerating) p.d. was increased	A1
