

Question	Answer	Marks
5(a)	$n\lambda = d\sin\theta$	C1
	$\lambda = 640 \times 10^{-9} \text{ (m)}$	C1
	$2 \times 640 \times 10^{-9} = 1.7 \times 10^{-6} \times \sin\theta$ so $\theta = 49(^{\circ})$	A1
5(b)	$2 \times 640 \times 10^{-9} = 3 \times \lambda$ or $1.7 \times 10^{-6} \times \sin 49^{\circ} = 3 \times \lambda$	C1
	$\lambda = 4.3 \times 10^{-7} \text{ m}$	A1
