

7(a)	induced e.m.f. is (directly) proportional to rate	M1
	of change of (magnetic) flux (linkage)	A1
7(b)	V_2 stepped, all at non-zero values, between $t = 0$ and $t = 0.40$ s	B1
	V_2 shown with same non-zero magnitude up to $t = 0.15$ s and after $t = 0.25$ s but with a different magnitude between these times	B1
	V_2 shown with a magnitude between $t = 0.15$ s and $t = 0.25$ s that is three times the magnitude before $t = 0.15$ s and after $t = 0.25$ s	B1
	V_2 shown with same sign up to $t = 0.15$ s and after $t = 0.25$ s, and opposite sign in between	B1
7(c)(i)	changing current in coil causes changing (magnetic) field or changing (magnetic) flux causes induced e.m.f. in ring	B1
	induced e.m.f. in ring causes current in ring	B1
	(magnetic) field due to (induced) current in ring interacts with (coil's) field to cause upwards force (on ring) or (induced) current in ring perpendicular to (coil's magnetic) field causes upwards force (on ring)	B1
7(c)(ii)	both magnetic fields reverse direction so ring still jumps up or current (in ring) and (coil's) field both reverse so ring still jumps up	B1
