

7	(a)	(i) 3.2 mm	A1	[1]
		(ii) 20 mm	A1	[1]
	(b)	(i) energy is transferred/propagated (through the water) or wave profile/wavefronts move (outwards from dipper) so progressive	B1	[1]
		(ii) to produce waves with constant/zero phase difference/coherent waves	B1	[1]

	Cambridge International AS/A Level – October/November 2015	9702	22

- (c) (i) path difference is λ B1
- water vibrates/oscillates with amplitude about $2 \times 3.2 \text{ mm}$ B1 [2]
- (ii) path difference is $\lambda/2$ so little/no motion/displacement/amplitude B1 [1]
