

2 (a)	uses a tangent (anywhere), not a single point draws tangent at correct position acceleration = 1.7 ± 0.1 <i>(outside 1.6 → 1.8 but within 1.5 → 1.9, allow 1 mark)</i>	C1 B1 A2 [4]
(b) (i)	because slope (of tangent of graph) is decreasing acceleration is decreasing	M1 A1 [2]
(ii)	e.g. air resistance increases (with speed) (angle of) slope of ramp decreases	B1 [1]
(c) (i)	scatter of points about <u>line</u>	B1 [1]
(ii)	intercept / line does not go through origin	B1 [1]
3 (a)	helium nucleus OR contains two protons and two neutrons	B1 [1]
