

- 6 (a) (i) e.m.f. induced proportional / equal to
rate of change of (magnetic) flux (linkage) [2]
- (ii) e.m.f. (induced) only when flux is changing / cut B1
direct current gives constant flux B1 [2]
- (b) (i) (induced) e.m.f. / current acts in such a direction to produce effects B1
to oppose the change causing it B1 [2]
- (ii) (induced) current in secondary produces magnetic field M1
opposes (changing) field produced in primary M1
so not in phase A0 [2]
- (c) (i) alternating means that voltage / current is easy to change B1 [1]
- (ii) high voltage means less power / energy loss (during transmission) B1 [1]
